Your wood. Your home.

A short guide to your wood samples

Thank you for your interest. With these samples you are holding a piece of your future furniture in your hands. Take your time with them – ideally in daylight and in the room where the bed will stand. And one thing first: the hardest wood is not the best. In a bed, what matters is the construction, not the hardness of the surface.

OUR RECOMMENDATION FOR YOUR BED

Lime LIGHT · FINE · TIMELESS

The calmest grain. Fine, even texture, hardly any knots, a light, almost white colour. Lime has no scent, takes oil beautifully evenly and looks especially airy with white oil. For everyone who loves understated elegance.

Alder WARM · NATURAL · LIVELY

The warm choice. A gentle reddish-brown tone, calm structure, warmer still with the years. Alder is dimensionally stable, stays calm even in dry, heated rooms and forgives a lot. Natural oil brings out its warmth, white oil lightens it.

Softer wood – a stable bed.

Lime and alder are softer than oak. But a bed is not stressed like a dining table: no plates, no scratches, only resting weight. What matters are sufficiently strong side rails and solid joints. And that is exactly how we build your bed. In any case the bed is made entirely of solid wood, which you can sand down and re-oil years later.

Swiss stone pine ALPINE CHARACTER

Very light and soft, with striking dark knots and an unmistakable scent. Ideal for everyone looking for exactly this grain and scent in the bedroom. If you prefer a calmer, scent-free wood, lime or alder is the better choice.

Oak EXPRESSIVE · ROBUST

Hard, heavy and with strongly marked growth rings – our first choice for dining tables. In a bed, oak is a question of style, not stability: noticeably heavier and a higher price.
